HERING steam generators for pharmaceutical industry

Over the past few years, HERING AG has been able to achieve dozens of references for steam generator systems in production facilities of the world's largest pharmaceutical companies.

Almost all well-known pharmaceutical manufacturers, whether in the USA, Singapore, France or Puerto Rico, rely on HERING steam generators to sterilize their production facilities with saturated steam and to produce preliminary products for intravenous medicine.

The process steam is produced from the waste heat of the upstream combined heat and power plant (CHP) without a direct fired burner and thus also reduces CO2 emissions.

HERING AG is currently producing two more steam generator systems for a well-known Swiss pharmaceutical group for its production facility in Southeast Asia.

Also in this project, HERING emphasizes its performance leadership in the field of steam generators through sophisticated thermodynamic designs, minimal pressure losses and maximum steam output.
