Launch of new Oil Processing Units

Updated line of modular oil purification units

Since decades Hering AG is recognized as the specialist for customized oil treatment units for global the electrical industry. After an intensive rework and update of technologies the new line of oil processing units type OPU have been launched successfully.

Three types of technical arrangements build the backbone of the new line of oil purification units.

- OPU-1** Basic technical arrangement built for standard operations for filling of new transformers and oil treatment in storage tanks
- OPU-2** Advanced technical arrangement built for automatic operation for onsite services and the repair of transformer units
- OPU-3** Professional technical arrangement build for the complete range of high efficient oil treatment

All units are available with different flow rates (2000 / 4000 / 6000 and 8000 liters per hour) and provide the best treatment values in terms of water content and gas content.

The modular layout of the new OPU-line, 100% in-house manufactured by Hering AG and built with components made in Western-Europe only, provide the most cost-effective way of oil purification.
