### Pilotplant for Polymer Processing

Hering AG has a long tradition in building equipment for the chemical industry worldwide. The last coup was an order Hering AG received from one of the most famous research institutes of Germany: Building a pre-polymerizer for a pilot plant. The apparat is designed for a MAWP of 160 bar at a MAWT of 350°C. The pressure test was absolved at 200 bar, equivalent to the pressure at 2.000m depth of the sea.

The length of about 3m gives an impression of the required wall thickness. After the pilot phase transfer will happen to the world's largest chemical site. The planned large-scale production will need some more of these polymerizers.
