HERING AG supplies eight highpressure-steam boilers

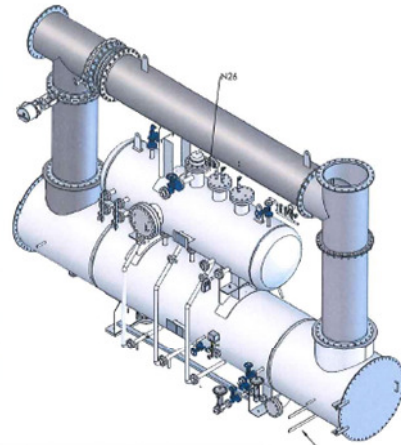

HERING AG was assigned with the construction and fabrication of eight highpressure-steam boilers for a project in the USA.

The steam boilers were designed and produced acc. ASME Sect VIII Div 1 and proved by notified body.

100 tons stainless steel were used. The total length of the exhaust gas tubes is appr. 50 km.

Additional to the steam boilers HERING AG supplies the complete safety equipment and the boiler control.

The steam boilers will use the waste gas heat of gas engines at their destination in the USA and will produce 1.700 kg/h saturated steam per each boiler.
